

# About Blackfield

We publish these documents to explain our business, technical options and plans. Specifications remain subject to final design and supplier confirmation. Financial projections are estimates; our proposed projects depend on funding and approvals.

Last updated: 2026-09-29

We bring energy trading, finance and engineering experience to our CNG programme in Nigeria. Our priority is a practical network built around reliable supply, suitable sites and customers who need it.

We plan to develop 150 CNG stations across Nigeria during 2027–2031. Our cost estimates assume 105 medium and 45 high-capacity stations; we will confirm each station's size through site assessment.

We plan to add 10, 20, 30, 40 and 50 stations in 2027–2031 respectively. Our first programme covers the first 50 stations. Our forecast runs to 2033, with no additional stations assumed in Years 6–7.

## Leadership

Rotimi Donald · Chairman / CEO

## Management credentials

Our team brings together careers in international energy trading, the NLNG ecosystem, investment banking and engineering. We draw on that experience when assessing supply, structuring funding and planning delivery in Nigeria.

01

More than 30 years

### International energy trading

Our management team has more than 30 years of experience trading crude oil, gas and refined products across Asia, North America, Europe and Africa, including Nigeria's domestic market.

02

More than 25 years

### NLNG business & ecosystem

Our team has more than 25 years of experience in the NLNG business and its wider commercial ecosystem, within Nigeria and internationally.

03

More than 30 years

### Investment banking

We bring more than 30 years of management experience in investment banking to our assessment of project economics, funding structures and investment opportunities.

04

More than 25 years

### West African refined-products trading

Our management team has more than 25 years of experience trading refined petroleum products along the West African coast and working with the region's commercial partners.

05

More than 30 years

### Engineering & EPC projects

Our team has more than 30 years of engineering project experience, including EPC. We use that background to assess scope, procurement, construction planning and the requirements for operations.

06

### International client & partner relationships

We work with clients and partners across North America, Southeast Asia, Europe, the Middle East, China and Africa. These relationships support our international outlook and our focus on Nigeria.

### Strong Nigerian & African presence

We have a strong presence in Nigeria and other African markets. Our local relationships and market knowledge inform how we assess opportunities and develop projects.

These figures refer to our team's experience in each field. We do not add them together or present them as our company's age or the operating history of our proposed stations.

## Our international relationships

We work with clients and partners across North America, Southeast Asia, Europe, the Middle East, China and Africa. These relationships support our international outlook and our focus on Nigeria.
